Maintaining reproducible data workflows while keeping data in sync, backed up, and easily accessible from within and outside the lab is a key challenge in research. To minimize time and effort scientists have to spend on these tasks, we provide a suite of tools designed for comprehensive and versioned management of scientific data including convenient storage of data, analysis and metadata annotation for easy reproducability, data sharing and re-usability.

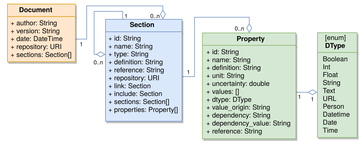
Collect and manage all information about your experiment

Main features
- Open metadata format [1]
- Flexible hierarchical key-value storage
- Save to common structured formats: XML, JSON, YAML
- Template system for reusable metadata structures
- Terminology repository [2] for reusable definitions

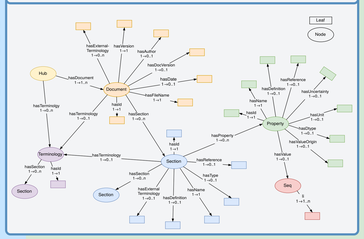
- GUI editor [3]
- Available for macOS and Linux
- Cross-document drag-and-drop for metadata subtrees

- Export to RDF retaining your own terms and structure
- Query metadata using semantic web technologies
- Search cross document via SPARQL queries
- Make metadata publicly available on meta.g-node.org

The odML Metadata format



odML RDF schema



public SPARQL resource
meta.g-node.org

Queries

py-odml

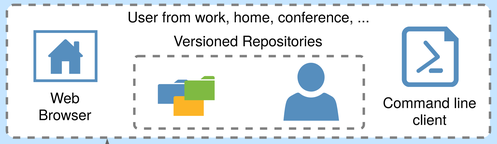
meta.g-node.org:
access diverse metadata datasets
all datasets are publicly available
searchable by SPARQL via API and web

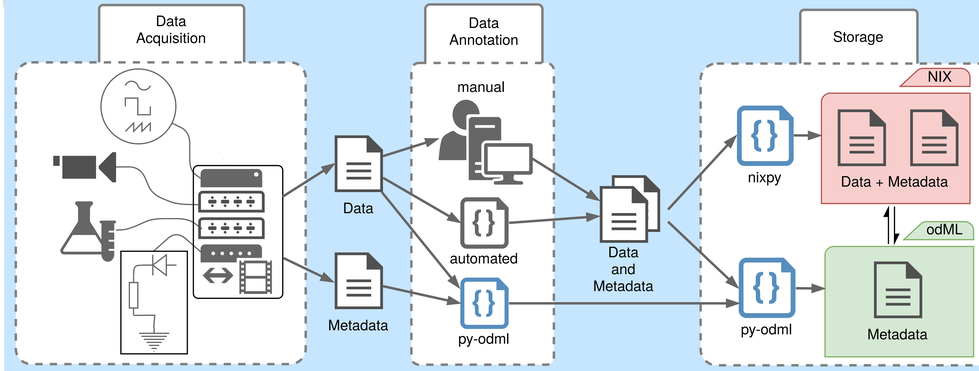
odML files in gin:
- indexed and searchable
- treeview rendering for convenient exploration

Secure data storage, easy collaboration and publication

Main features
- Access data from any location
- Free storage for scientific data [11]
- Built in versioning (built on git [12])

- Platform independent
- Secure access
- Public and private repositories
- Citable data by DOIs



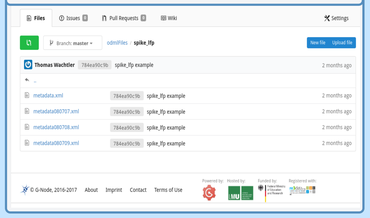


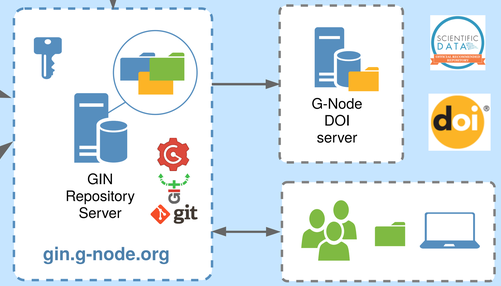
GIN Repository Workflow

- Browse, download, and upload data via web
- Download and upload large files via command line
- Automate workflows via command line client
- All changes are versioned automatically

GIN Client

GIN Web





Upcoming features
- Format validation
  - BIDS, odML, NIX, custom formats
- CI for scientific data, run automated tests for scripts and data integrity.
- automated export of odML to RDF

Collaboration
- User management
- User Access Levels
- On and offsite collaboration

Manage data and metadata together in an open, versatile format

Main features
- Open data format
- Store data, analysis results, and metadata conveniently in the same file
- Descriptive associations between data, analysis results, and metadata

- Free open source libraries for multiple programming languages: C++ [4], Python [5], Matlab [6], Java [7]
- NIX IO for Neo [8]
- Enables interoperability with Neo compatible tools, e.g., the Elephant toolkit [9]
- NIXView [10] Cross-platform GUI

The NIX data model
